Transdisciplinary research on digital geospatial possibilities enables new planning practice in Tanzania

Salla Eilola and Niina Käyhkö, Department of Geography and Geology, University of Turku

Figure 1. Collaboration partners from academic, governmental and non-profit sector as well as funding bodies involved in the transdisciplinary research and development of new participatory geospatial methods for planning.

Support for adopting new solutions

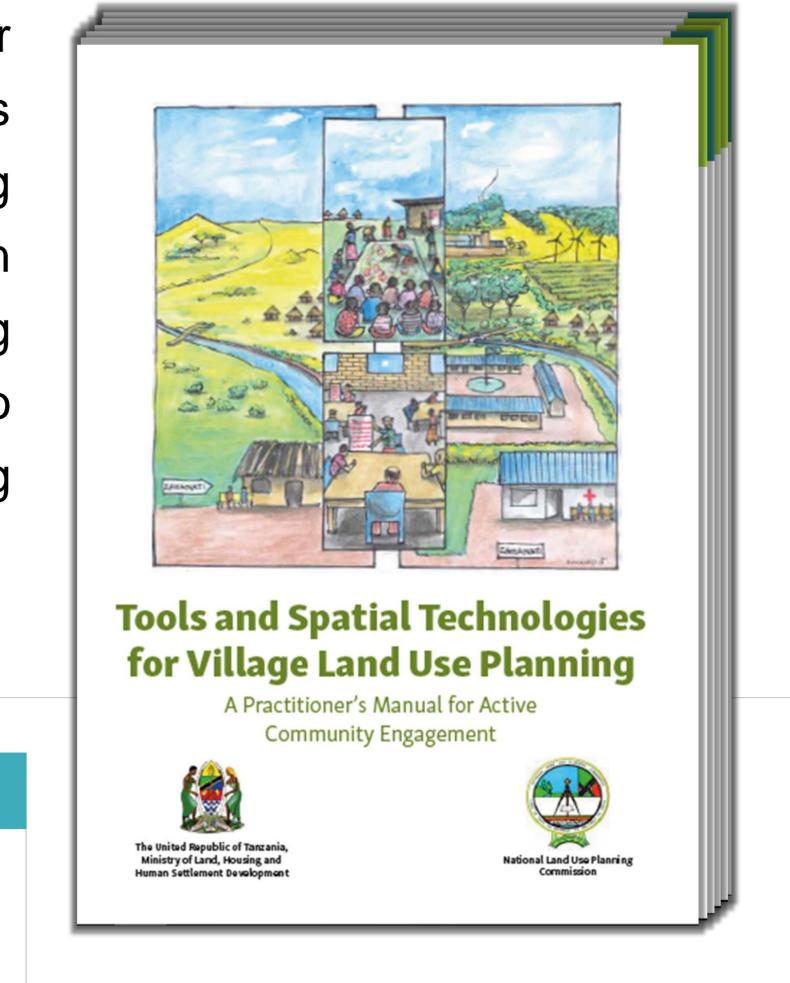

The research team with national authorities and other planning actors in Tanzania published a practitioner's manual on the developed participatory planning methods in 2018. The manual assists practitioners in adopting and adapting the methods into their planning practice. It also supports training efforts that aim to spread the knowledge and skills required for using geospatial technologies in the country.
